

SOAP PACKAGING MACHINERY

Rebuilt ACMA 711 Wrapper

Rebuilt ACMA 791 Wrapper

Soap Packaging Machinery

We are pleased to offer a full range of services for any packaging need in the soap industry. For many years we have been rebuilding several brands and types of soap packaging machinery:

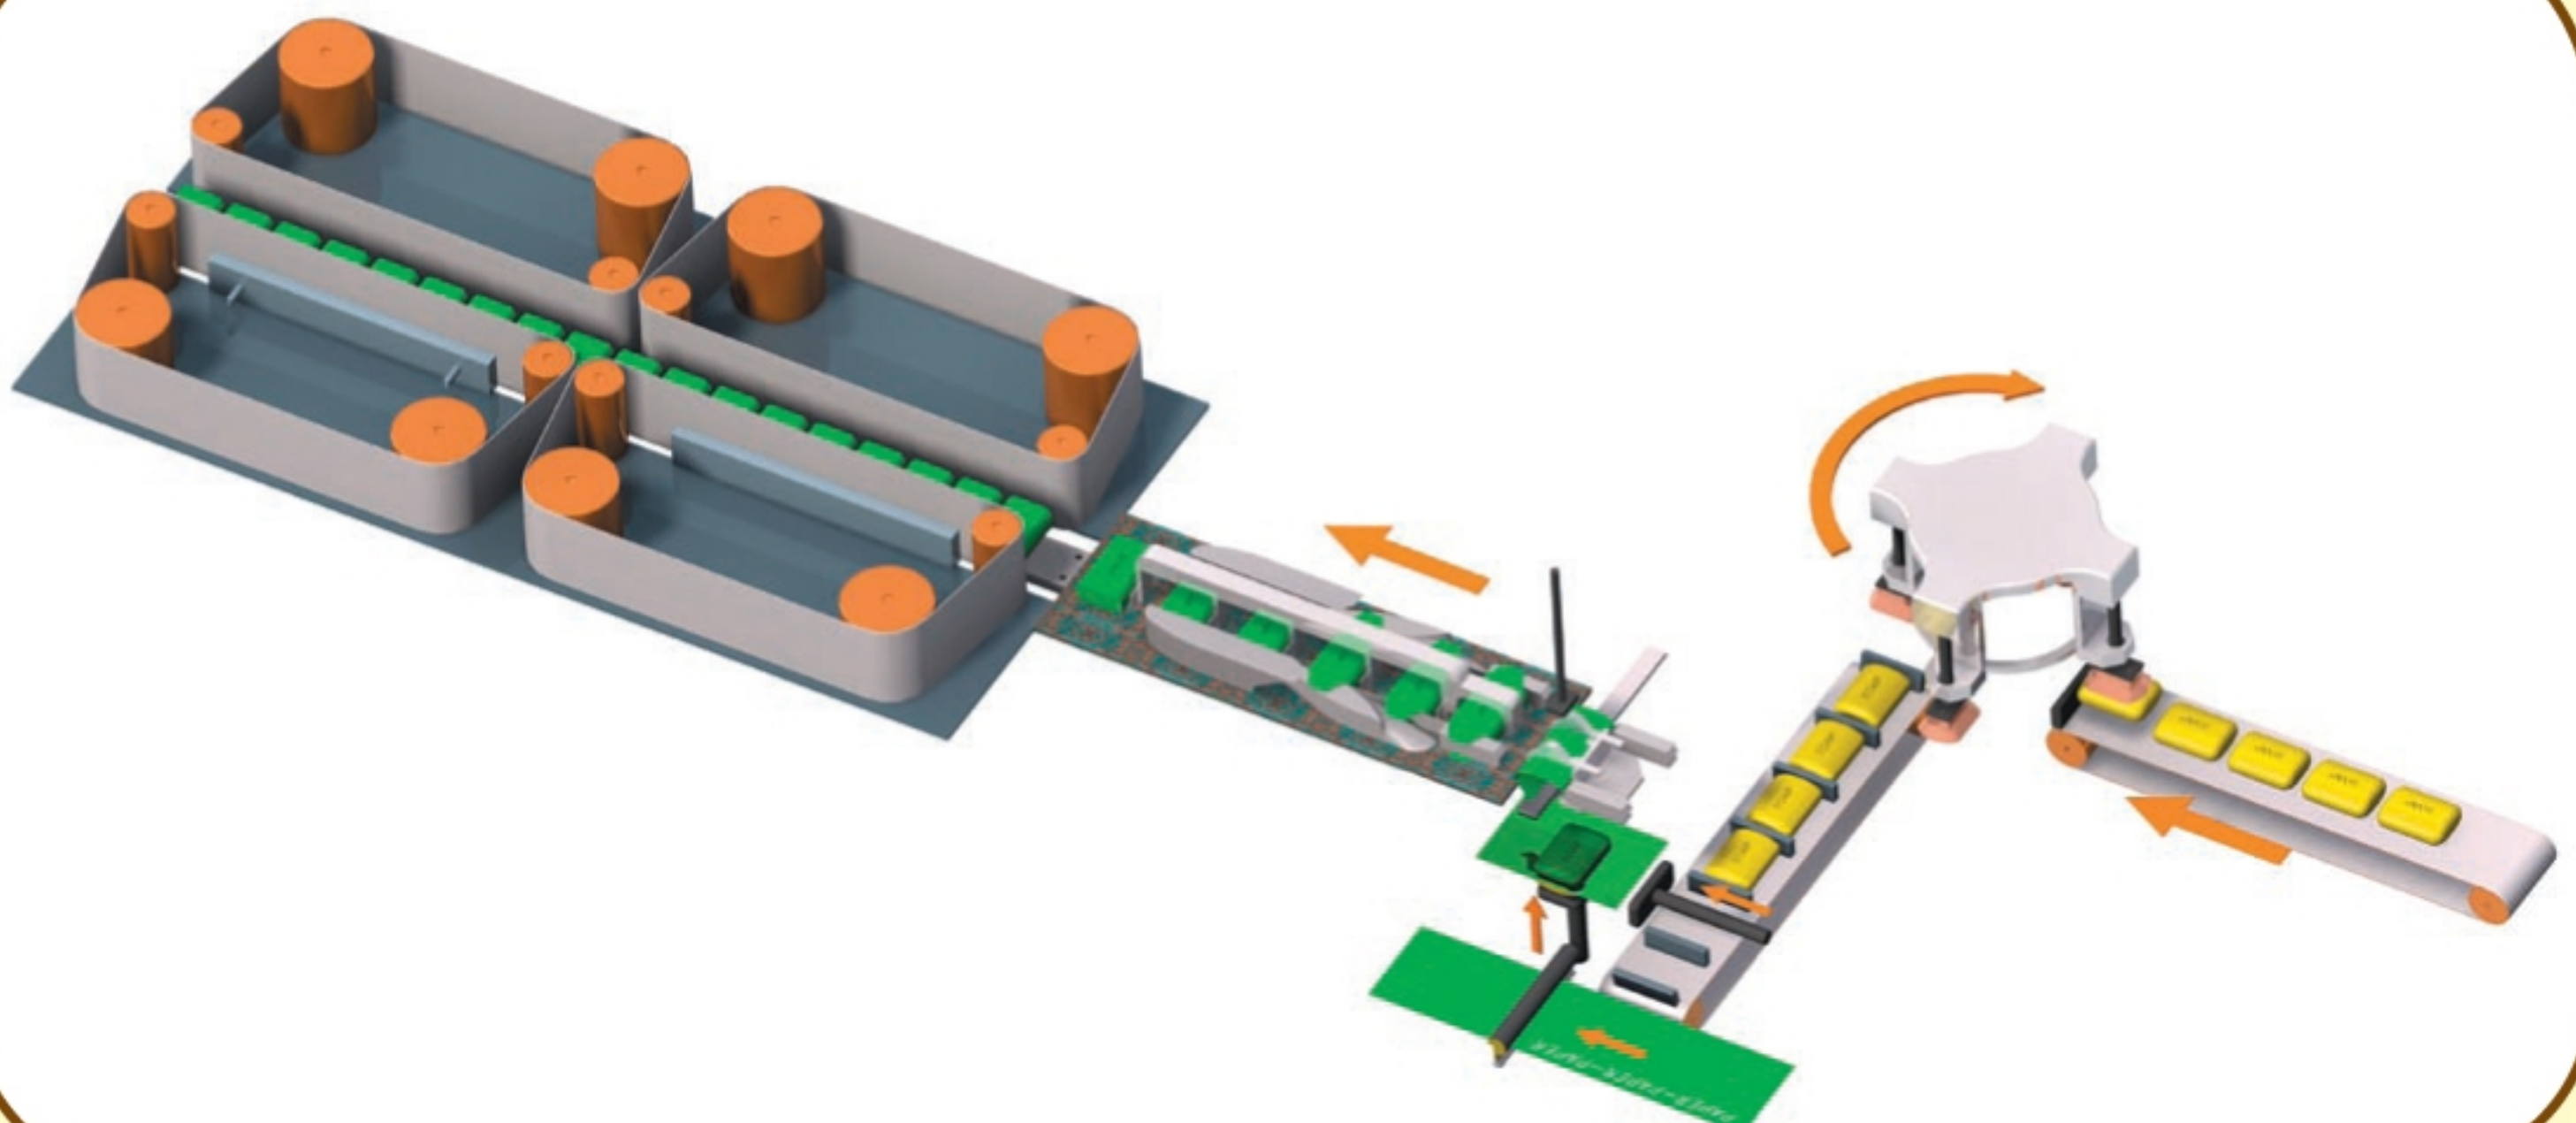

- ACMA and Carle & Montanari wrappers
- BFB Bundlers
- Continuous and alternate motion cartoners (CAM, Marchesini, IWKA, etc...)
- Stretch-film and pleat wrappers
- Flow wrappers

BOPP KITS

We supply complete kits for the use of Bi-Oriented Co-Extruded Polypropylene (BOPP) film. The "BOPP kit" generally improves the wrap even when using heat-sealable paper since the friction between the moving wrapped bars and the fixed side heating elements is eliminated by the use of movable Teflon belts and separate independent drives.

Rebuilt Carle & Montanari Wrapper

We designed and applied several new devices on existing machines in order to meet specific Customer needs: BOPP (Polypropylene) Kits, Soap Transfers and Print Registration Devices.

We tailor make the machines to meet the Customer's needs by adding the newly developed groups or existing optional groups like precut sheet feed from magazine, hot-melt devices and splicers.

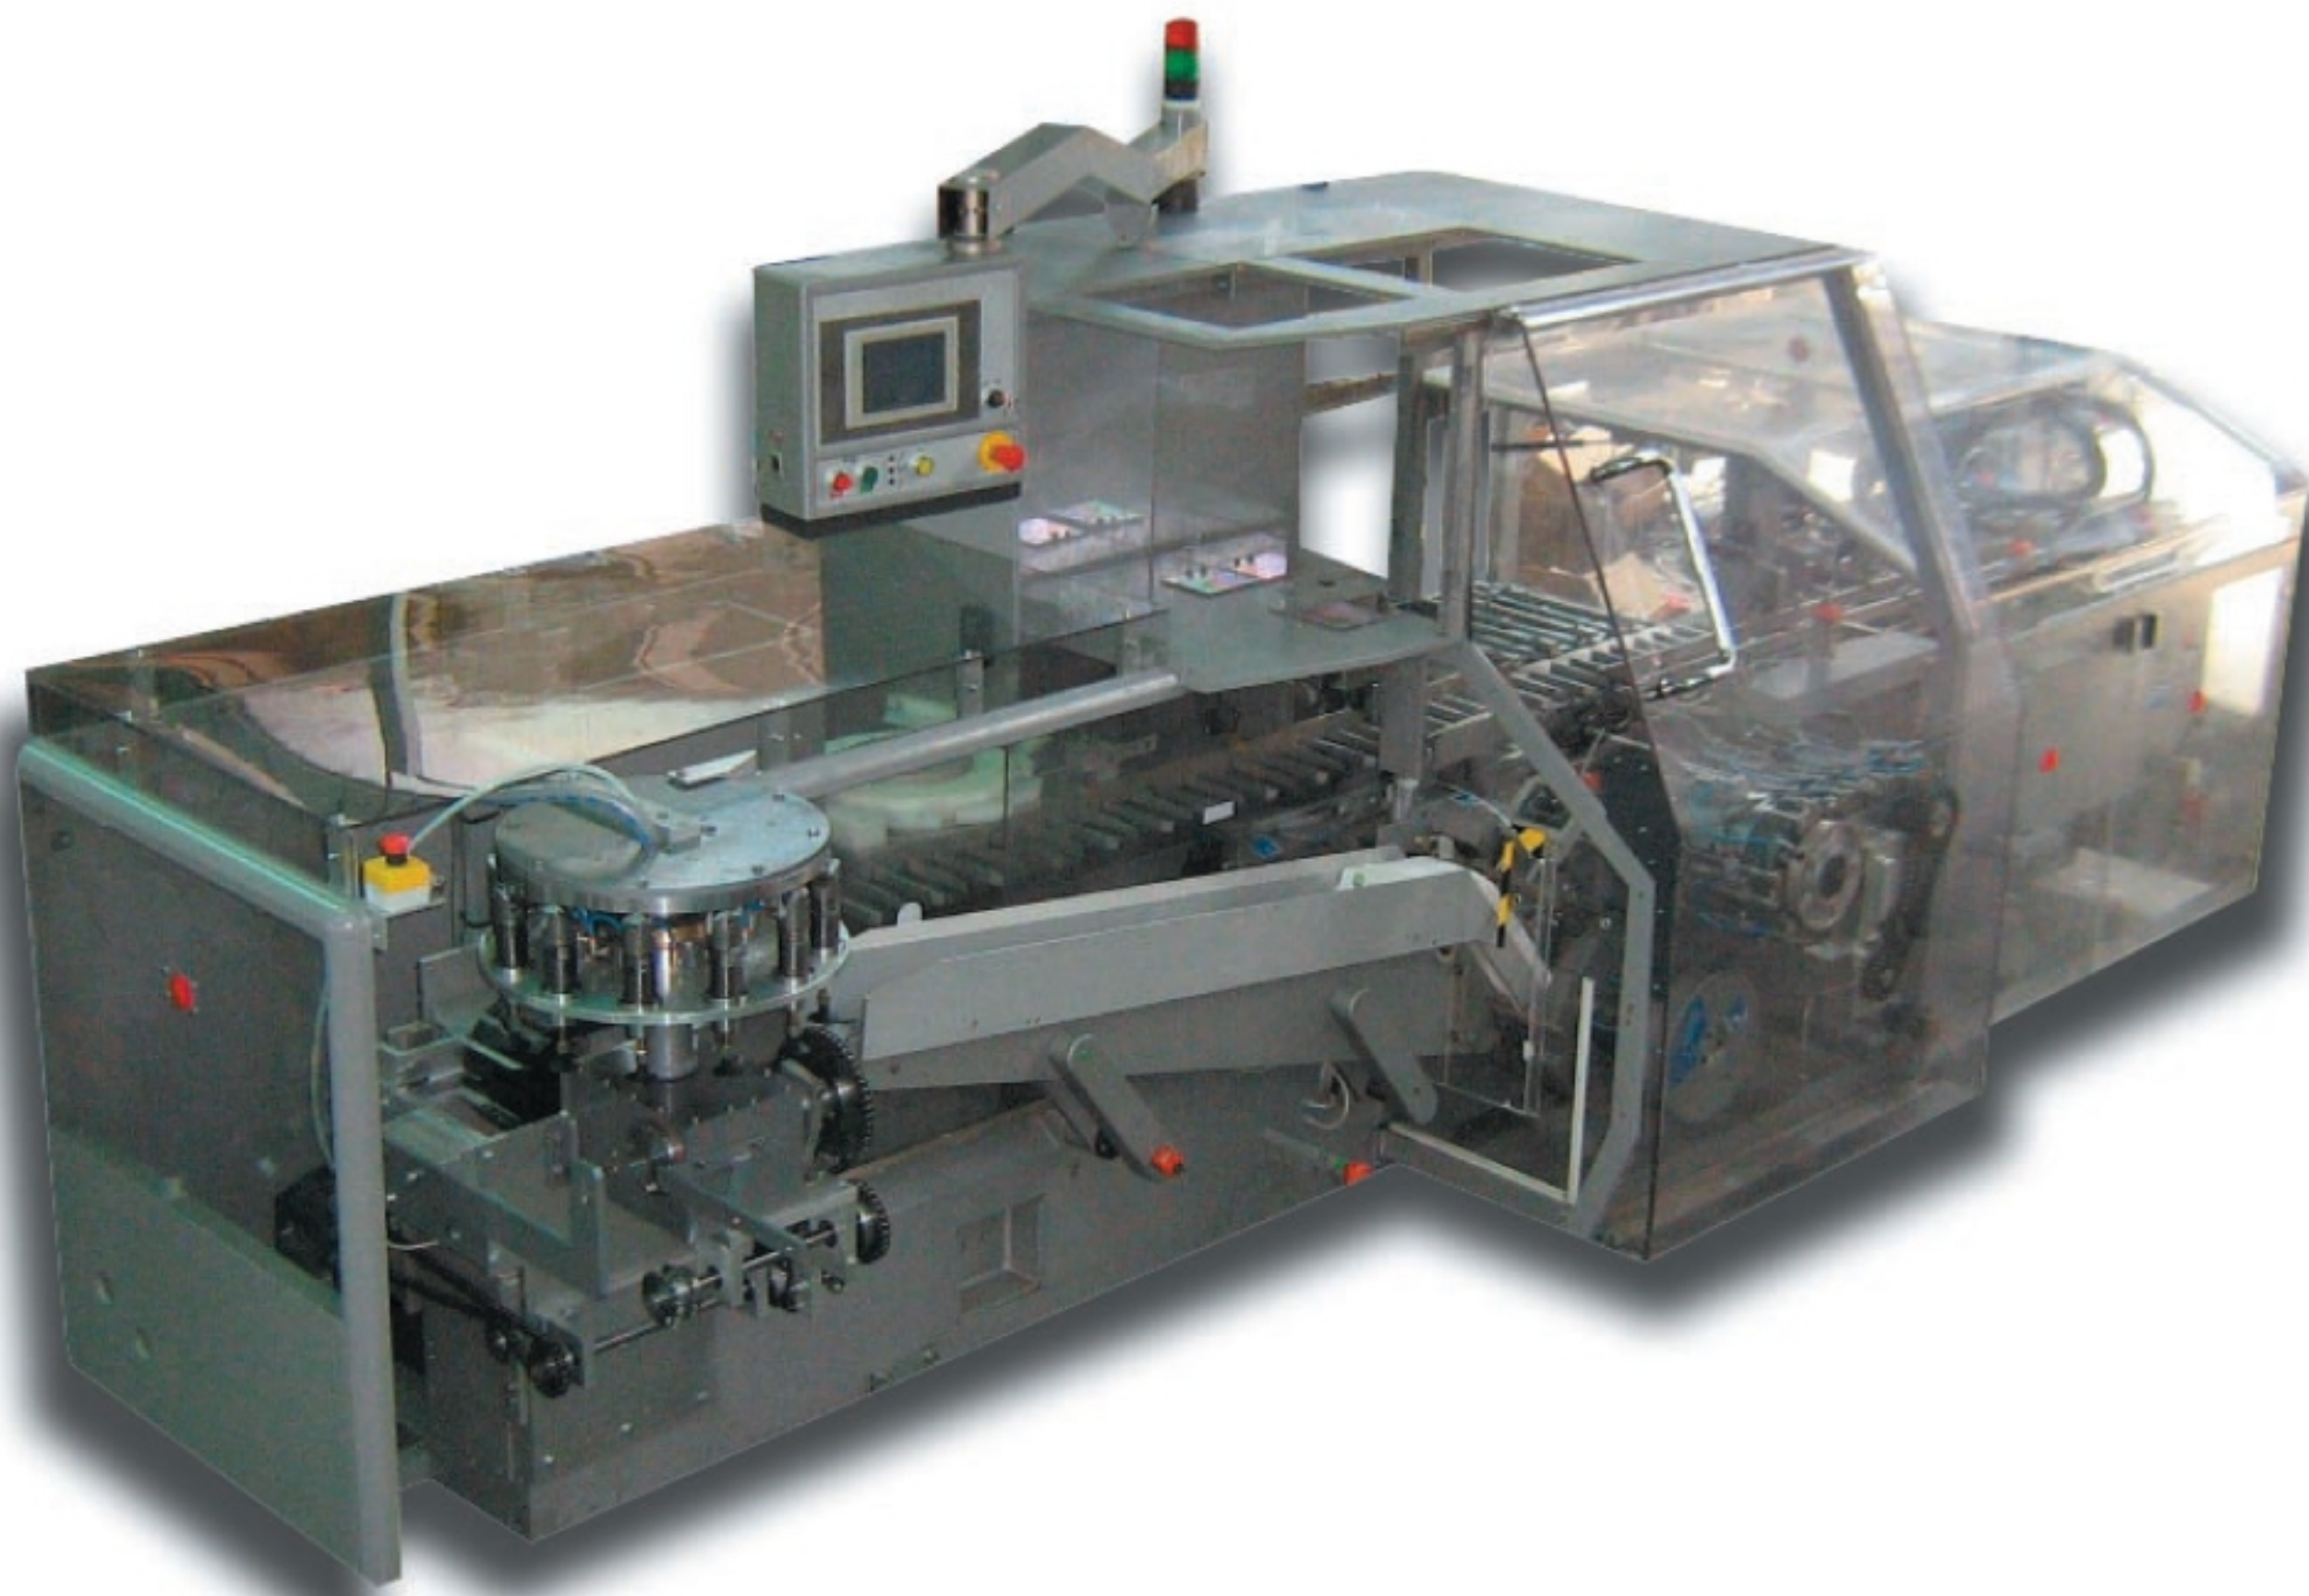

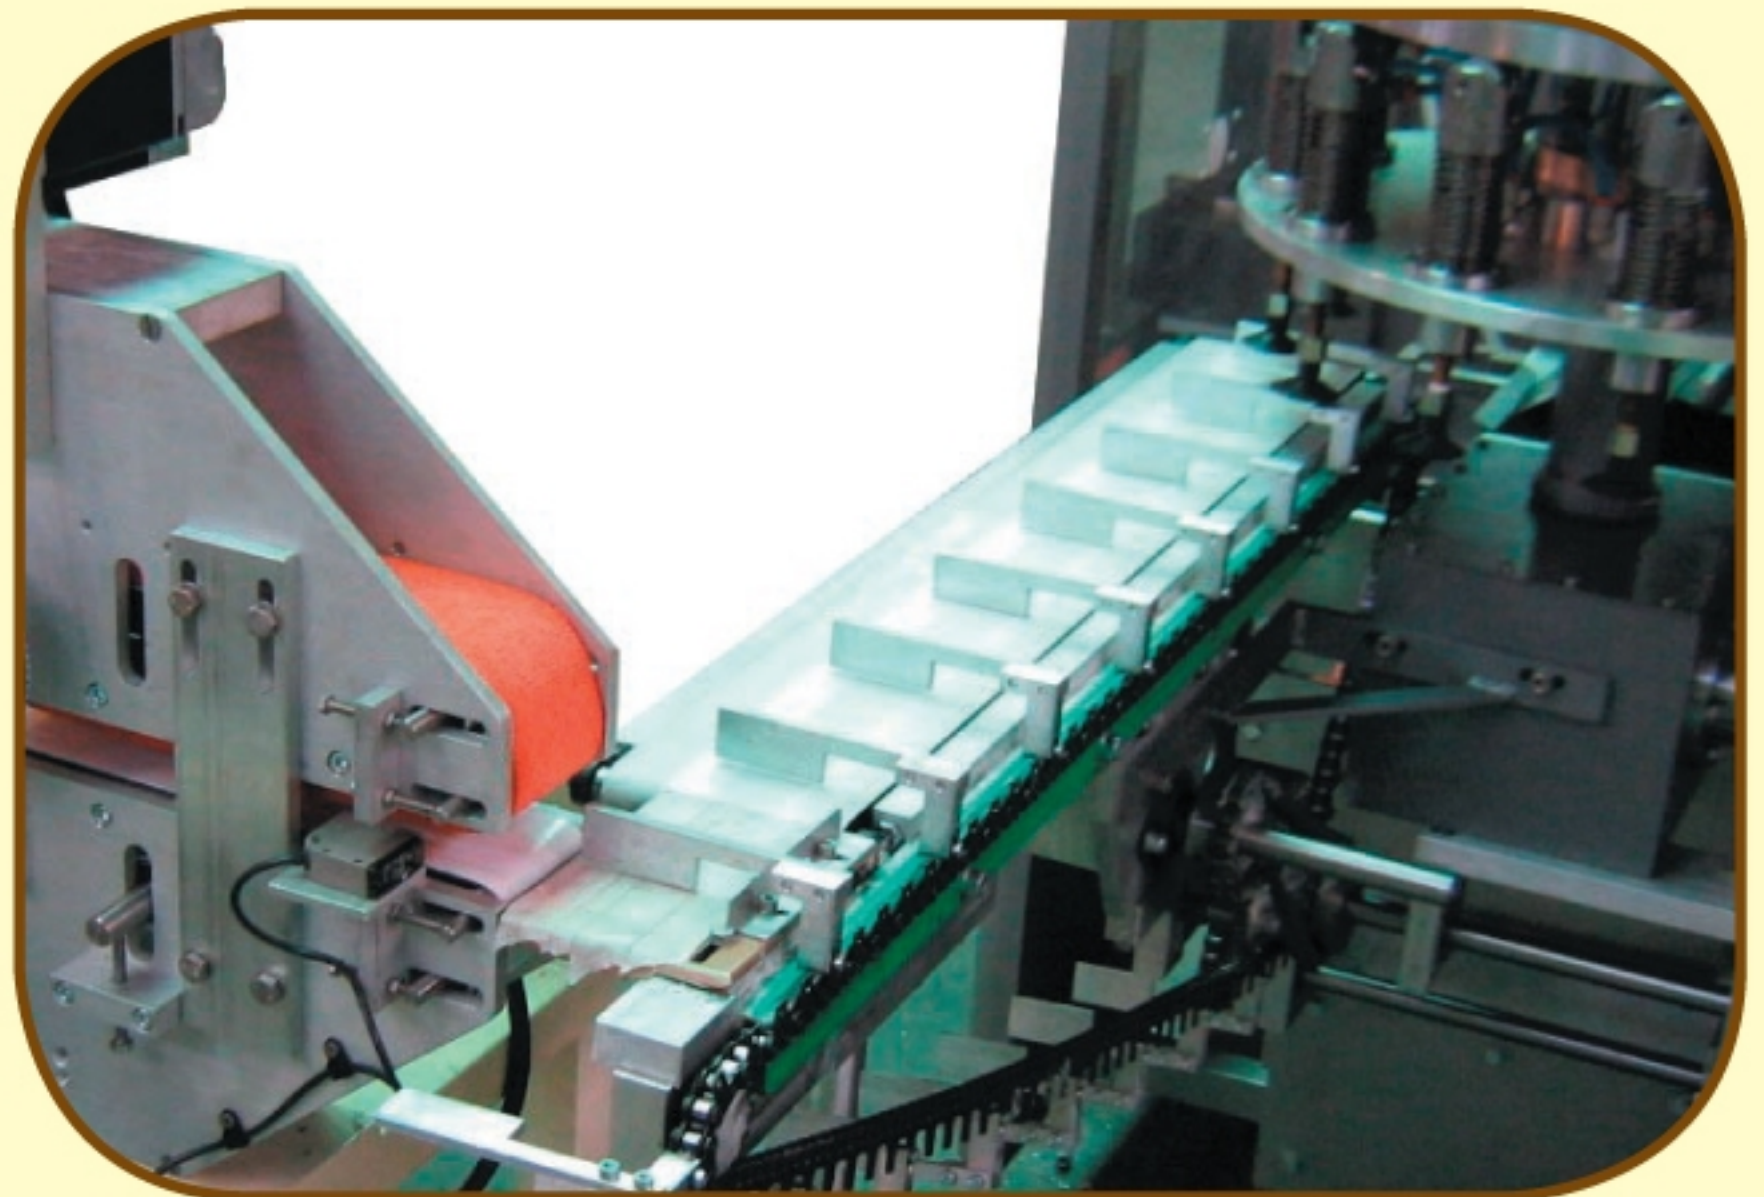

We offer a variety of services such as:

- ◆ experienced technicians for start-up or problem solving,
- ◆ specifications for wrapping materials,
- ◆ reconditioning of your existing machines,
- ◆ supplying complete change parts (size groups) and the most common spare parts for several different models.

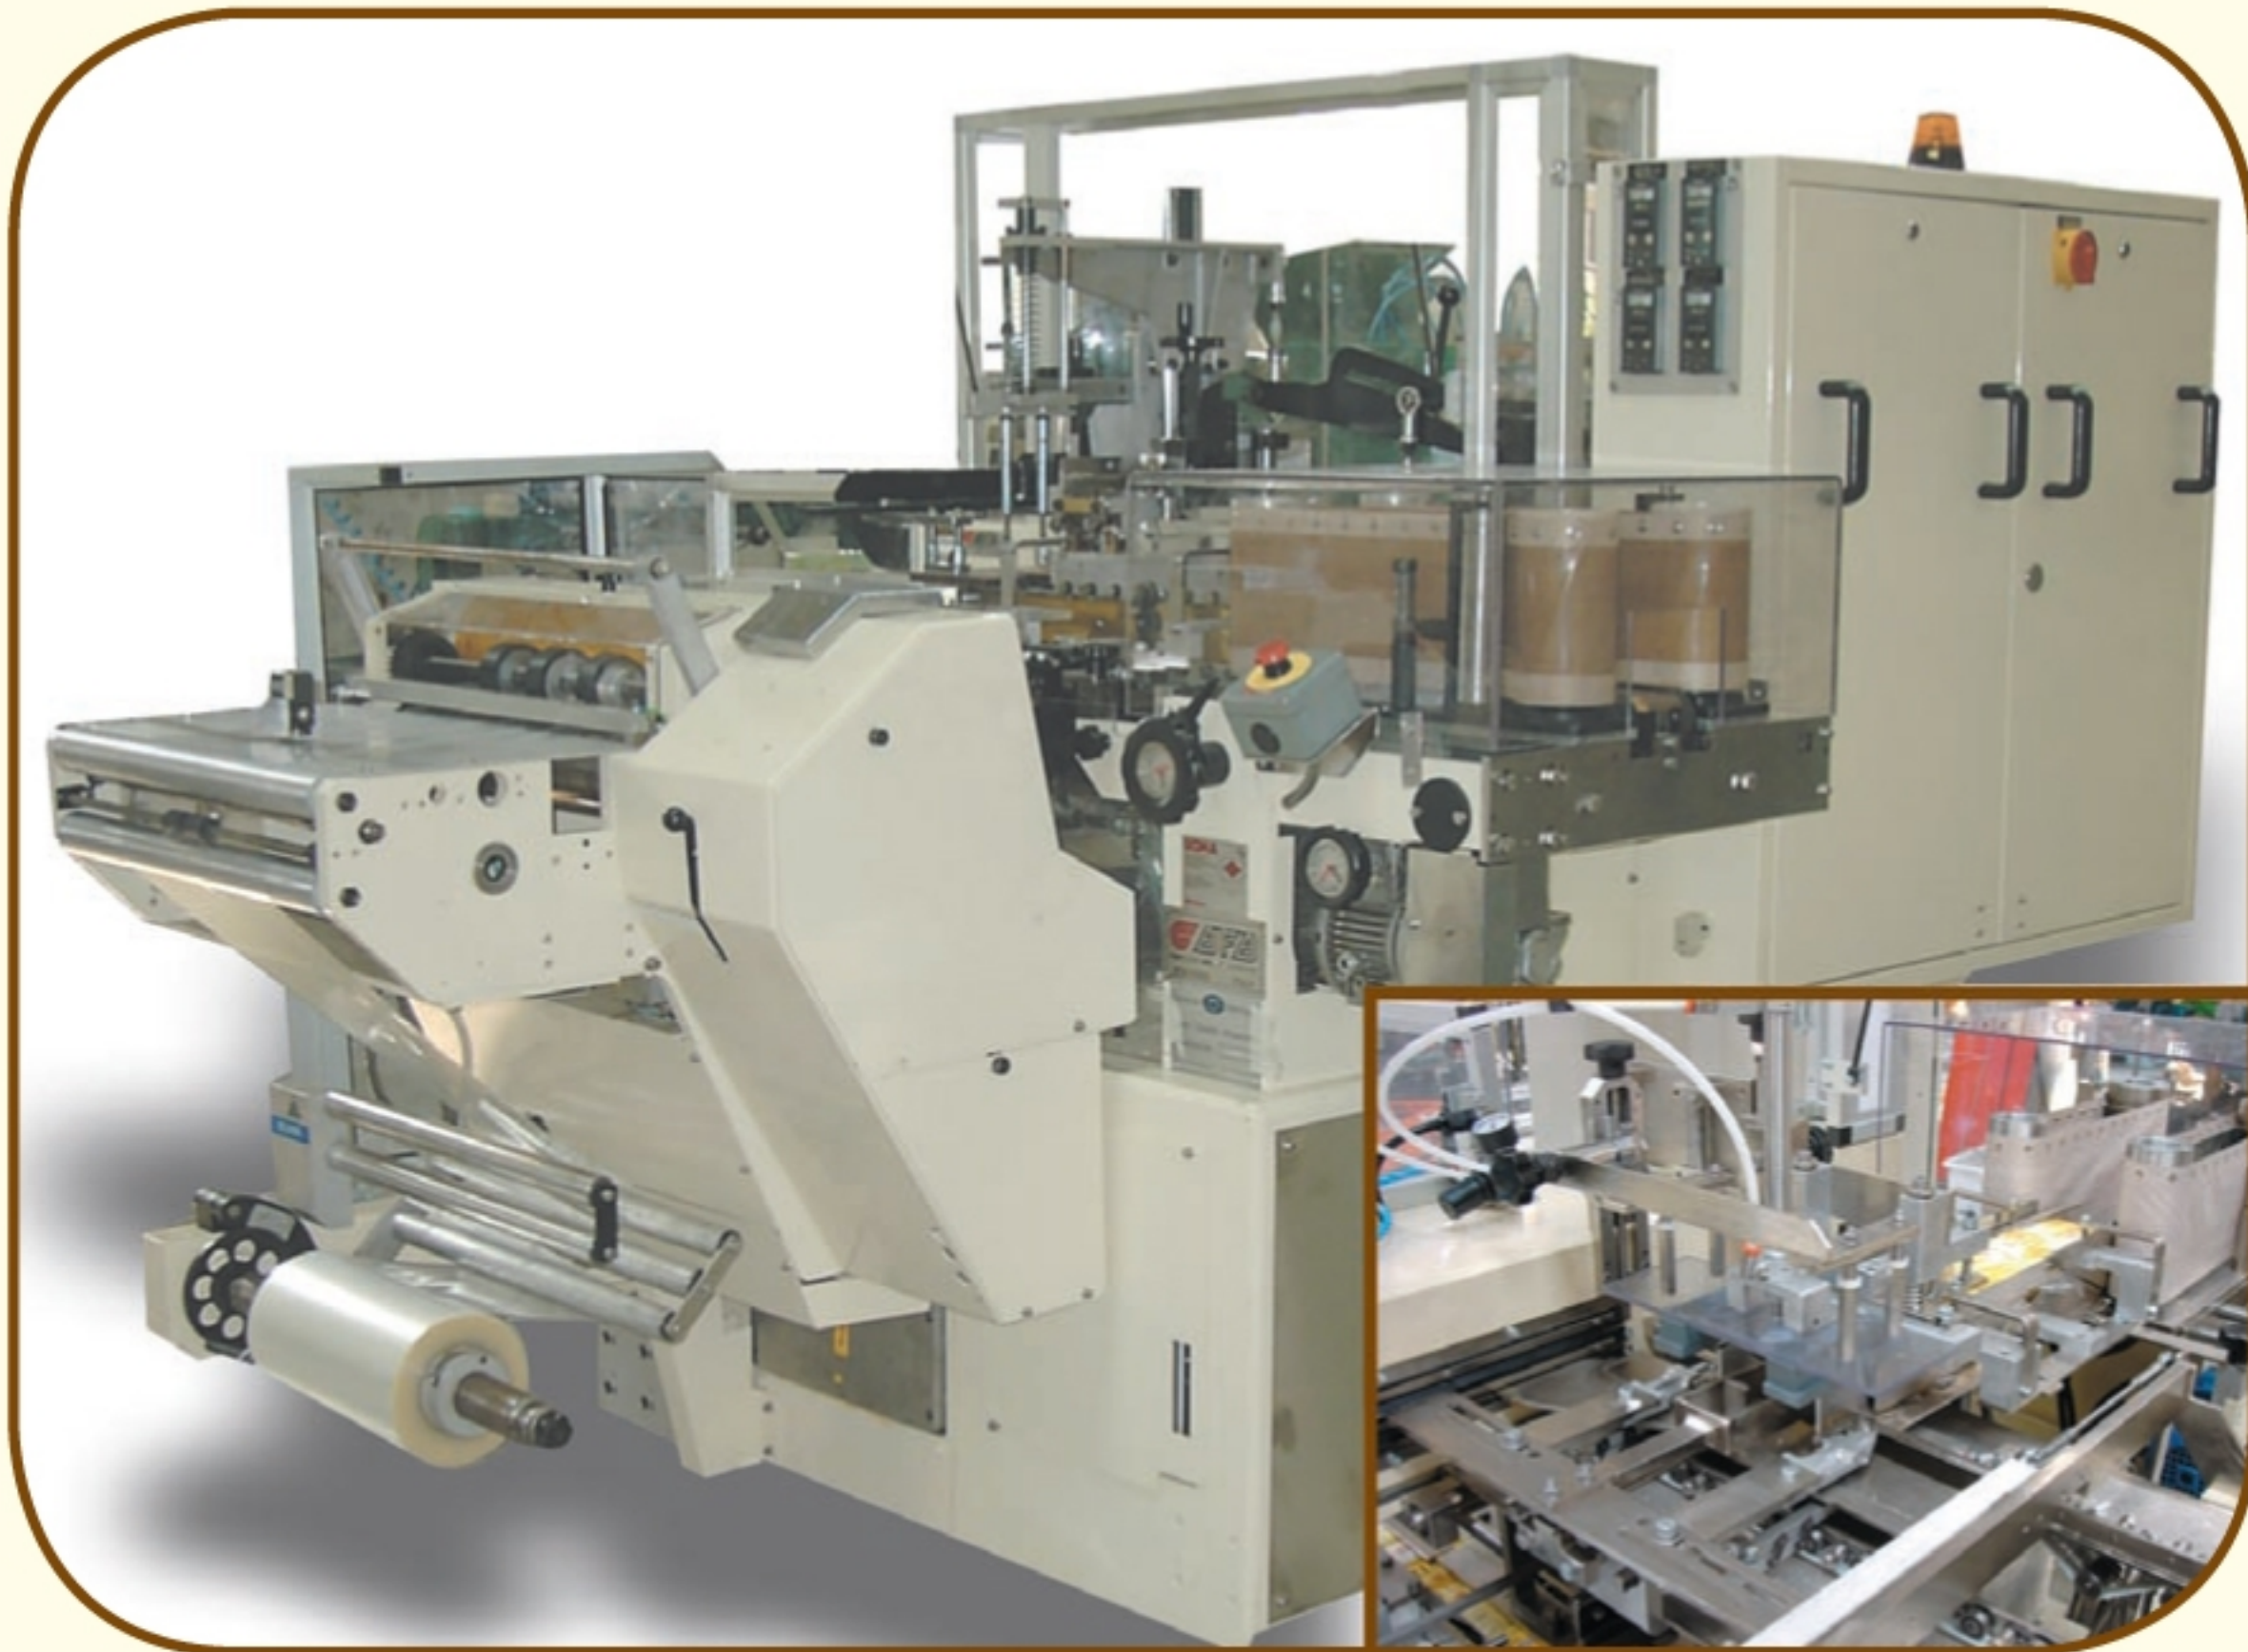

SOAP TRANSFERS

One of our missions is to transform packaging machines such as Cartoners and Bundlers, previously used in different industrial applications, into "soap" machines.

A range of Soap Transfers of our design are available for any production need, from 100 to 300 bars per minute

Rebuilt Marchesini MA-355 Cartoner

Rebuilt BFB 3711 Bundler

Rebuilt BFB 3786 Bundler
